

Namra Desai

Software Developer

Idar, GJ | 9316304919 | namra.d.29@gmail.com | [LinkedIn](#)

SUMMARY

Software Developer with 4+ years of experience building distributed, real-time systems and backend services, including a Master of Science in Computer Science from the University of North Carolina at Charlotte. Proven track record delivering high-throughput, production-grade platforms at Crispin Corporation (a Sony Group company) and driving automation solutions as a freelance developer. Strong foundation in Python, JavaScript/Node.js, and RESTful API design, with a focus on scalable, reliable software delivery.

WORK EXPERIENCE

Software Developer | Crispin Corporation, Sony Group Company

Raleigh, USA | Feb 2021 – Sept 2025

- Designed and implemented an end-to-end distributed monitoring platform — CoreAgent (real-time data collection & RMQ-based publishing), Dashboard Backend (multi-agent aggregation, filtering, configuration management), and Dashboard UI (configurable, operator-facing visualization) — supporting real-time operations across 100+ sites.
- Optimized high-throughput event processing pipelines handling 100+ sites with 10–15 channels and ~5,000+ events each, introducing concurrency, caching, batch processing, and per-dashboard configurable filters to improve scalability, reliability, and responsiveness. (Node.js)
- Developed a hub synchronization service to maintain data consistency across distributed systems and engineered real-time services for JIP broadcasting, optimizing latency so clients could make last-minute changes without disrupting live broadcasts. (Node.js, Express.js, GraphQL, C#, RabbitMQ)
- Spearheaded the design and launch of the Assetbase Service, improving media asset organization and streamlining content management. (Node.js, Python, Flask)
- Led architectural improvements to the config service to reduce page-render latency and enhance user experience, and built interactive web interfaces with two-way data binding and custom bindings. (Node.js, Knockout.js, GraphQL, Axios, CSS)

Freelance Software Developer | Valarix AI

Remote (Mexico-based client) | Feb 2026 – Present

- Built a production Python/Playwright automation platform for SAT (Mexican tax authority) CFDI invoice scraping and e.firma/FIEL credential validation, integrating backend REST APIs and secure encrypted credential handling.
- Automated end-to-end SAT document retrieval (Opinión de Cumplimiento, Constancia de Situación Fiscal) with FTP upload, monthly scheduling, state tracking, and interrupted-run recovery for reliable unattended operation.
- Implemented parallel multi-customer processing using Python multiprocessing/ProcessPoolExecutor, running concurrent browser sessions while preserving per-customer sequential document flow.
- Deployed and operate the service on a DigitalOcean Linux droplet via PM2 with structured logging, log rotation, and live monitoring, sustaining ~360–380+ document requests/hour in production; diagnosed and resolved CPU, memory, I/O, and timeout bottlenecks.
- Currently developing an additional service for the client, extending the platform's automation capabilities.

Software Developer Intern | Inluciv

Cambridge, USA | Nov 2020 – Feb 2021

- Implemented new features with responsive layouts and optimized performance based on project requirements, ensuring seamless integration with existing code. (React.js, Hooks, TypeScript)

SKILLS

Languages: JavaScript, Python, C#

Frameworks: Node.js, Express.js, Flask

Automation & Tooling: Playwright, PM2, DigitalOcean, Docker basics

Messaging Systems: RabbitMQ

Databases: SQLite, MySQL

Web Technologies: HTML5, CSS3, Knockout.js, jQuery, GraphQL, REST APIs

Source Control: Git, TFVC

Practices: Object-Oriented Design, Agile Development, SDLC

EDUCATION

University of North Carolina at Charlotte, USA Aug 2018 – May 2020

Master of Science in Computer Science

- Served as Graduate Teaching Assistant for Algorithms and Data Structures under Dr. Qiong Cheng.
